

QCCamera

Streamable camera-plugin for Gira QuadClient

QCCamera enables embedding of IP-camera video streams into Gira QuadClient. QCCamera supports all customary video formats, codecs and resolutions and is thus compatible with a multitude of camera models. At streams of up to 480p HS-Camera can even be used with Gira Control9 / Control19.

Features:

- Support for up to 50 cameras
- Configurable image mode (streaming or single image), per camera (therefore WebCams can be integrated)
- Up to six configurable actionbuttons per camera
- Behavior of actionbuttons (visible on demand or permanently visible) configurable per camera
- Configurable picture format (stretch image function) per camera
- Fullscreen view (in original image format)
- Each camera allows configuration of two stream-URLs (e. g. low resolution for plugin-view, high resolution for fullscreen-view)
- Direct access to each camera from an integrated list
- Direct access to each camera via communication object (e. g. via presence detector)
